

Altieri

"The proven leader in architectural engineering solutions."

Altieri has designed building systems for iconic cultural, educational, and landmark buildings, distinguished private residences, commercial spaces, and makerspaces for 60 years. We have made it our mission to engineer solutions that enhance the architectural vision by fostering a culture of creativity.

As a team, we are known for considerable expertise in special systems serving highly-controlled environments, notably complex museum and performing arts venues, college and university buildings, libraries, and large-scale campus programs. We are honored by our well-earned reputation for delivering seamless integration of these systems within the architectural and landscape context, for our commitment to excellence in the design of responsible energy solutions, and for the relationships we develop with our clients. New and long-term clients praise our "unrivaled multi-disciplinary expertise," "gold standard of creative design," exceptional attention to detail, and outstanding team coordination.

A distinct hallmark of Altieri's on-going success is our team's steadfast commitment to quality. With our Principals and Associate Principals involved in the design and direction of each and every project, our clients are assured that we are valued partners from start to finish.
